System to the lungs, from right atrium.  
sends blood from lungs back to heart.

biology 12 circulatory system

Flashcards and Study Sets ...

12. Describe one relationship between  
fibrinogen and blood clotting. Or  
leukocytes and agglutination.

Fibrinogen is a plasma protein that  
creates fibrin threads that help create  
the blood clot. Leukocytes are white  
blood cells that create antibodies.

Antibodies attach to pathogens and  
cause them to clump, or

functions to transport blood and oxygen from the lungs to the various tissues of the body. The heart pumps the blood throughout the body. The lymphatic system is an extension of the human circulatory system that includes cell-mediated and antibody-mediated immune systems. The components of the human circulatory system include the heart, blood, red and white blood cells, platelets, and the lymphatic system.

## Human Circulatory System

The human circulatory system which is also known as blood vascular system comprises muscular chambered heart, a network of closed branching blood vessels and fluid in the form of blood. Blood vessels – Arteries, Capillaries, and Veins. Arteries can carry blood from the heart to the of the parts of the
