Functional change is a key outcome measure of rehabilitation episodes. The FIM instrument comprises 18 items, each of which is assessed against a seven-point ordinal scale, where the higher the score for an item, the more independently the patient is able to perform the tasks assessed by that item.

## **Functional Independence Measure | RehabMeasures Database**

The Functional Independence Measurement (FIM) application allows multiple clinicians (inter-disciplinary assessment) to complete a FIM assessment and document it in the medical record as a progress note and/or as a response to a consult. The FIM application transmits this data to FSOD in Austin and creates a FSOD case in the database.
