Concept mapping: a tool for improving
patient care. Suzanne Aberdeen

Lecturer in nursing, Monash
University, Clayton, Victoria, Australia.

This article reviews the use of concept
mapping as a person-centred problem-
solving aid to assessment, risk
management, care evaluation and
care planning for nurses. Concept
maps are diagrams that are used to
organise, represent and create
knowledge, and provide a useful
framework for critical analysis and
problem solving.

Concept mapping can help both those in the nursing profession and those who are in nursing school. Creating a concept map develops a nursing student's critical thinking and clinical reasoning skills. It can also help students take the theoretical knowledge that they have gained from class and apply it to an actual case study or real-life patient in an organized way.

Books

Concept mapping and mind mapping have been used in science education since the 1970s. Nursing students in undergraduate and graduate classes are frequently asked to create concept maps or mind maps around a central concept or idea. These assignments may be used for individual or group projects and as a starting point for graduate student research.
