Structural Stability of beams and columns. Inappropriate or inadequate connections of beams and columns is hazardous and can lead to collapses and worker fatalities. This section sets forth performance and specification requirements for connecting beams and columns, in order to minimize the hazard of structural collapse during the early stages of the steel erection process.

Stability of concrete structure described in different ways by different authors and researchers. For example, it is defined as the power to recover equilibrium or Resistance to sudden change, dislodgment, or overthrow. Moreover, a stable structure shall remain stable for any imaginable system of loads. That is why, load types and point of applications are not taken into considerations while a decision is made about whether a structure is stable or not.
