As it currently operates, the commercial real estate construction industry is a disaster full of built-in waste. Seventy-percent of all projects end over budget and late. The buildingSMART Alliance estimates that up to fifty-percent of the process is consumed in waste. Almost every project includes massive hidden taxes in the form of delays, cost overruns, poor quality, and work that has to be redone. Building new structures is a fragmented, adversarial process that commonly results in dissatisfied customers and frequently ends in disappointment, bitterness, and even litigation. The industry must change—for its own good and that of its customers. But while the industry has tried to reform itself, it can't do it alone. Real change can only come from business owners and executives who refuse to continue paying for a dysfunctional system and demand a new way of doing business. The Commercial Real Estate Revolution is a bold manifesto for change from the Mindshift consortium—a group of top commercial real estate industry leaders who are fed up with a system that simply doesn't work. The book explains how business leaders can implement nine principles for any project that will dramatically cut costs, end delays, create better buildings, and force the industry into real reform. The Commercial Real Estate Revolution offers a radically new way of doing business—a beginning-to-end, trust-based methodology that transforms the building process from top to bottom. Based on unifying principles and a common framework that meets the needs of all stakeholders, this new system can reform and remake commercial construction into an industry we're proud to be a part of. If you're one of the millions of hardcore cynics who work in commercial construction, you probably think this sounds like pie in the sky. But this is no magic bullet; it's a call for real reform. If you're an industry professional who's sick of letting down clients or an owner who's sick of cost overruns and endless delays, The Commercial Real Estate Revolution offers a blueprint for fixing a broken industry.

Bachelor Thesis from the year 2012 in the subject Business economics - Business Management, Corporate Governance, grade: 1,1, University of applied sciences, Düsseldorf, language: English, abstract: A CEO is presenting the annual report in front of 20,000 employees when suddenly the projector breaks down. A key account manager cannot pay the restaurant bill for his top client as he has lost his wallet. A newly elected mayor misses his first public speech as he is being held up in a traffic jam. All these examples taken from daily business and their negative effects, such as the loss of time, a damaged reputation and higher costs, could have been avoided with an appropriate planning beforehand. Projects are even more critical as they are by definition unique. [...] Although this idea seems to be consistent and companies should therefore strive to complete their projects successfully, only 32 % of all projects succeed in terms of compliance with time, budget and specifications. 44 % are completed late, exceeding budget, showing a deficit in features or with a combination thereof. The remaining 24 % of all projects fail, i.e., they are cancelled before completion or are finished but never used. Going back to the year 2000, this failure rate has never been higher. A reason for this may be that the unique nature of projects also implies uncertainties. [...] the more aspects of a project are unique, the higher are the entailed uncertainties and the higher is the risk to fail. And projects are becoming more and more demanding with an increasing pressure on companies in terms of time, budget and quality. As globalisation is rising, the need for fast and comprehensive adjustments of processes, systems and products is increasing simultaneously. [...] To be able to bear the growing competitive pressure, companies need fast, innovative and interdisciplinary solutions, which they achieve best by applying projects. But projects lacking clear targets, specifications, communication channels, schedules and budgets are likely to fail. Hence, an appropriate project planning is vital to avoid or at least minimise all uncertainties and risks that could lead to a full or partial failure of the project. But project planning itself does not guarantee success. It must be executed in a way that is comprehensive and efficient at the same time. [...] Finding out which planning processes are required and to which detail is crucial for performing a completely successful project.

The 5th Edition of Jack Marchewka's Information Technology Project Management focuses on how to create measurable organizational value (MOV) through IT projects. The author uses the concept of MOV, combined with his own research, to create a solid foundation for making decisions throughout the project's lifecycle. The book's integration of project management and IT concepts provides students with the tools and techniques they need to develop in this field.
